Naveen K

Java Full Stack Developer

United States | Phn: +1(408)-461-7708

Email: naveenloya1520@gmail.com | **linkedin.com/in/naveen-k-b9151531b**

PROFESSIONAL SUMMARY

- With over 10+ years of software development experience, I have contributed to the design, development, and deployment of web-based and client-server applications using Java/J2EE technologies across multiple domains as a full-stack developer.
- Utilized core Java concepts including OOP, Collections Framework, Multithreading, Generics, Exception Handling, File I/O, and concurrency, incorporating features such as Lambda expressions, to develop business logic for Java/J2 EE web applications while leveraging Java libraries.
- Skilled in Java technologies including JSP, Servlets, Struts, and JEE for front-end design.
- Proficient in utilizing Java 8 features such as Lambda expressions and Stream API for improved performance.
- Experienced in building scalable server-side applications using frameworks like Spring and Hibernate, combined with J2 EE technologies.
- Experienced in RESTful APIs and microservices architecture.
- Experience in Spring Boot which is radically faster in building cloud Microservices and developing spring-based applications with very less configuration.
- Experience in developing User Interface (UI) Applications and professional web applications using HTML5, CSS3, Bootstrap, Angular, React, JavaScript, Typescript, J Query, AJAX, RWD, JSON, XHTML, Vue.js, and XML.
- Well-versed in database management systems: SQL Server, MySQL, Oracle, and MongoDB, including database schema design, query optimization, and data modeling.
- Experienced in setting up CI/CD pipelines using Jenkins for automated build, test, and deployment processes.
- Skilled in crafting and deploying cloud-native applications on AWS (EC2, ECS, EKS, Route53, IAM, CloudFront, CloudWatch, SNS, SQS, Lambda, S3, RDS), Azure, Google Cloud Platform (GCP), and PCF utilizing Docker, Kubernetes, and Terraform/ARM templates.
- Deployed containerized applications on OpenShift using Docker containers and Kubernetes orchestration, automating the deployment and scaling processes for increased efficiency.
- Hands-on experience with JUnit, and Log4j in developing test cases and determining application functionality.
- Experienced in Agile development, Test Driven Development (TDD), Behavior Driven Development (BDD), and Scrum methodologies.
- Competent in automated testing with JUnit, TestNG, and Selenium.
- Accomplished in Git for version control and streamlined collaboration within development teams.
- Involved in building and deploying Apache ANT/MAVEN scripts for deployment and customizing WAR/JAR file management for web applications.
- Proficient in project management tools like JIRA for efficient project tracking, task management, and team collaboration.
- Proficient in test-driven development frameworks such as Karate, Mockito, Wire Mock, Selenium, and Mocha.

TECHNICAL SKILLS:

Programming Languages	C, Java, Python
Web Technologies	HTML, CSS, XML, JavaScript, JSP, JSTL, J Query, AJAX, Angular JS, Angular 2/4/6/9/11, TypeScript. ReactJS
Frameworks	Struts, JSF, Spring, Hibernate and JUnit
Microservices	Spring Boot, Spring Rest
Web Services/Logging	REST and SOAP Web Services, log4j.
Databases	Oracle 10g/11g/12c, MYSQL, MongoDB, Cassandra
Web/Application Servers	Apache Tomcat, IBM Web Sphere and JBoss.
Testing	JUnit, Mockito, Selenium, Q Test
Development Tools	Eclipse, Net Beans, IntelliJ Idea, Microsoft Visual Studio Code
Version control	GitHub, SVN, Apache Subversion and CVS.

Bug tracking	JIRA, Visual studio. Version one
Tools & Utilities	Apache Maven, Gradle, Jenkins, ANT and Postman, SonarQube, ETL, Snowflake
Operating Systems	Windows 7/8/10, MacOS, Unix and Linux
Cloud Technologies, DevOps Tools & other	AWS, Open-Shift, Jenkin, Rabbit MG, Apache MG
Big Data Technologies	Apache Kafka, Apache Ni fi

PROFESSIONAL EXPERIENCE

Client: Embassy Bank | Pennsylvania

Role: Sr Java Full Stack Developer Jan 2023 to Current

- Designed and developed RESTful web services using Java 17, Spring Boot, and Microservices architecture under Service-Oriented Architecture (SOA) principles to support core banking operations like fund transfers, account validation, and transaction history, exchanging data in JSON format for seamless integration.
- Implemented Spring Cloud API Gateway for centralized routing, load balancing, and security enforcement using OAuth2 and JWT tokens, ensuring secure communication between internal and third-party financial services.
- Developed reusable and scalable microservices for modules such as Payments, Account Services, Transactions, and Customer Profile Management , ensuring fault tolerance and transactional consistency across distributed systems.
- Built responsive and dynamic user interfaces using ReactJS, HTML5, CSS3, JavaScript (ES6), and Bootstrap , providing an enhanced digital experience for retail and corporate banking customers.
- Integrated Spring Data JPAwith Oracle Database for efficient data persistence and optimized SQL queries to handle large- scale financial transactions with minimal latency and maximum consistency.
- Implemented Apache Kafka for real-time event streaming and asynchronous messaging between microservices, enabling instant updates on transactions, payments, and account activity.
- Developed NodeJS-based utility services for lightweight backend tasks such as log parsing and API monitoring, ensuring better system observability and supporting the main Spring Boot microservices.
- Deployed and managed services on AWS Cloud using EC2, S3, RDS, and CloudWatch, focusing on auto-scaling, performance monitoring, and disaster recovery , fully handled from a developer standpoint.
- Configured and maintained CI/CD pipelines using Jenkins, automating build, test, and deployment workflows across multiple environments.
- Integrated SonarQube for continuous code quality analysis and used Log4 j for detailed application logging, proactively identifying and resolving production issues.
- Designed and executed unit and integration tests using JUnit and Mockito, achieving high code coverage and ensuring robust backend performance.
- Implemented Jest frameworkfor unit testing of ReactJS components, improving UI reliability and reducing front-end regression defects.
- Conducted API testing and validation using Postman, Swagger UI, and SOAP UI , ensuring compliance with banking API standards and maintaining end-to-end functional accuracy.
- Collaborated with product owners, QA, and DevOps teams in an Agile Scrum setup for sprint planning, requirement grooming, and daily stand-ups using JIRA.
- Coordinated with security and compliance teams to ensure data encryption, secure API access, and adherence to banking regulations and audit policies .
- Used Git for version control following the Git Flow branching strategy , maintaining code integrity during concurrent development.
- Leveraged Maven for build automation and dependency management, ensuring consistent artifact creation across development environments.

- Participated in performance tuning and load testing, improving API response times by 25% and ensuring high availability under peak banking loads.
- Contributed to application modernization, replacing legacy monolithic modules with containerized microservices to enhance scalability and reduce deployment time.
- Mentored junior developers in Spring Boot, ReactJS, and microservices best practices , improving team delivery and technical consistency.

Client: County of Santa Clara | San Jose, California
Role: Java Full Stack Developer May 2021 to Jan 2023

- Designed and developed RESTful Web Services using Java 8 /17, Spring Boot, and JSON for data exchange. Utilized Postman, Swagger UI, and SOAP UI for service validation and testing.
- Implemented Microservices Architecture with Spring Boot and Spring Cloud (API Gateway), transforming monolithic applications into independent services, improving scalability, reliability, and maintainability.
- Developed and optimized ETL processes with Spring Batch, enabling faster and more reliable batch processing in critical business workflows.
- Integrated OAuth2 -based authentication for securing microservices and external API interactions.
- Built dynamic front-end user interfaces with ReactJS, Redux, JavaScript (ES6), HTML, CSS, and Bootstrap, delivering responsive Single Page Applications (SPAs). Performed usability testing to improve UI/UX and accessibility.
- Leveraged MongoDB for NoSQL data storage and retrieval, creating Object-to-Document mappings using Spring Data JPA. Configured MongoDB sharding for high availability and scalability .
- Implemented real-time event streaming using Apache Kafka to support large-scale, high-volume data pipelines.
- Applied JUnit and Mockito for unit testing of Java services and Jest for ReactJS testing, ensuring high code coverage and reliable software quality.
- Utilized Maven for build automation and Git for version control, adopting Git Flow strategy for collaborative parallel development.
- Designed and maintained CI/CD pipelines in Jenkins, integrating with SonarQube for continuous code quality checks.
- Deployed and managed applications in AWS Cloud environments, leveraging S3 for secure storage and scaling resources to optimize performance.
- Experienced in Agile (Scrum& Kanban) methodologies, contributing to sprint planning, backlog refinement,and daily stand-ups using JIRA.

Client: Merck | Rahway, NJ
Role: Backend Developer May 2019 to March 2021

- Followed Agile (Scrum) methodology for iterative development, sprint planning, and backlog grooming, ensuring timely delivery of features.
- Designed and implemented Service-Oriented and Microservices Architectures using Spring Boot for modular, scalable, and reusable backend services.
- Built RESTful APIs with Spring Boot, exchanging data in JSON format and secured endpoints with OAuth2 authentication and authorization.
- Applied Hibernate ORM for database persistence, implementing mappings, HQL queries, and optimizing database transactions.
- Utilized Angular 14, TypeScript, HTML5, CSS3, Bootstrap, and JavaScript to create reusable components and develop dynamic single- page applications (SPAs) with responsive UI/UX.
- Implemented Karma and Jasmine frameworks for Angular unit and integration testing, ensuring reliability of frontend components.
- Deployed and consumed ActiveMQ message queues for asynchronous communication between distributed services.

- Integrated Spring Cloud API Gateway for centralized routing, load balancing, and service discovery in microservices environments.
- Managed SQL Server database for data persistence, developing stored procedures, triggers, and optimized queries to improve backend performance.
- Automated builds using Gradleand maintained Git version control, adopting branch management strategies for multi-team collaboration.
- Designed and maintained CI/CD pipelines in Jenkins, integrating unit testing and code quality checks for seamless deployments.
- Leveraged Azure Cloud Services to configure and deploy scalable backend services, ensuring high availability and security compliance.
- Conducted unit testing with JUnit and Mockito, improving reliability and minimizing production defects.
- Enhanced collaboration and sprint tracking using Rally (Agile Central) for project management and progress reporting.

Client: Lululemon, Dallas, TX

Role: Java Full Stack Developer March 2017 to April 2019

- Followed Agile Scrummethodology for iterative development, sprint reviews, and backlog refinement, ensuring timely delivery of high-quality software.
- Developed applications using Monolithic Architecture with Spring MVC framework, handling request/response lifecycle through controllers and views.
- Designed and implemented RESTful Web Services using Spring MVC, exchanging data in JSON format for seamless integration with client applications.
- Utilized Spring JDBC for data persistence, creating DAO layers and optimizing SQL queries for efficient database interaction.
- Developed and maintained Oracle SQL database components including stored procedures, triggers, and complex queries to support business logic.
- Built responsive front-end applications with AngularJS, HTML5, CSS3, JavaScript, Bootstrap, and AJAX, delivering dynamic user interfaces and improving usability.
- Performed unit testing with JUnit and Mockito for backend components and Karma/Jasmine for AngularJS frontend testing, ensuring code reliability.
- Implemented SVN for version control and Ant for build automation, enabling streamlined development and deployment.
- Integrated Log4j for centralized application logging, improving monitoring, debugging, and issue resolution.
- Managed requirements, task tracking, and defect resolution using TFS (Team Foundation Server) in Agile development cycles.
- Designed client-side validation using JavaScript and AngularJS directives, enhancing data accuracy and reducing backend validation errors.

Client: Wipro | India

Role: Java Full Stack Developer August 2015 to December 2016

- Followed Agile methodologywith daily standups, sprint planning, and retrospectives to ensure smooth delivery of application modules.
- Designed and developed enterprise-level applications using Struts framework with Monolithic architecture, implementing robust business logic in Core Java/J2EE.
- Built and consumed SOAP Web Services, exchanging data in XML format, and implemented WSDL for service contracts and interoperability.

- Applied JPA ORM for persistence layer, creating DAOs, writing entity relationships, and managing transactions for seamless integration with the DB2 database.
- Developed dynamic, responsive front-end modules using JSP, HTML, CSS, JavaScript, jQuery, and AJAX, enabling rich UI experiences.
- Implemented multithreading concepts for parallel execution and optimized data processing tasks, improving performance and throughput.
- Conducted unit and integration testing using JUnit and Mockito, ensuring code quality and reducing post-production defects.
- Utilized SVN for version control and Ant for build automation to streamline compilation and deployment processes.
- Integrated Slf4j logging framework for better application logging, monitoring, and debugging during production support.
- Deployed applications on Oracle WebLogic and IBM WebSphere servers running in UNIX/Linux environments, ensuring stability and scalability in production.

Client: Value Labs, India

Role: Java Developer May 2014 to June 2015

- Followed the Waterfall SDLC methodology for requirement gathering design, development, testing, and deployment phases of the application.
- Developed server-side components using Servlets and JSP within a J2EE architecture, implementing MVC design patterns for structured and maintainable code.
- Designed and consumed SOAP-based Web Services (JAX-WS) with WSDL and XML for enterprise-level data exchange between distributed systems.
- Implemented DAO patterns for database access and applied Spring JDBC (ORM framework for this project) to handle persistence operations.
- Worked extensively with DB2 database, writing SQL queries, stored procedures, and triggers for data manipulation and reporting.
- Developed dynamic web interfaces using HTML, CSS, JSP, JavaScript, jQuery, and Ajax, ensuring cross-browser compatibility and responsiveness.
- Applied JUnit and Mockito for unit testing, achieving high test coverage for Servlets and business logic.
- Managed code versioning and team collaboration using SVN.
- Automated builds and deployments using Apache Ant.
- Coordinated with QA and business analysts through HP ALM for defect tracking and test case management.
- Performed application deployment on Linux servers with Oracle WebLogic, ensuring smooth delivery to production environments.

EDUCATIOIN:

Bachelor of Technology in Electronic & Communication Engineering

Gudlavalleru Engineering College Gudlavalleru, AP, INDIA Aug 2010 – Apr 2014
