SUMMARY

Experienced software engineer with over 6+ years focused on developing scalable applications. Proficient in technologies like Ruby on Rails, JavaScript, and Node.js with expertise in creating RESTful APIs and Microservices. Experienced in managing MySQL, and MongoDB databases, Kafka, version control and testing with Rspec, and CI/CD via Jenkins. Expertise in delivering solutions with clean and scalable codebase that drive business growth and enhance user experiences. Well experienced in developing Enterprise solutions to SaaS, E-commerce, and Semiconductor domains.

SKILLS

- Ruby on Rails, Java, REST, GraphQL, Git, Rspec, MySQL, MongoDB, Redis, ElasticSearch, OpenSearch, Jenkins, Go, Python, Node, Express.
- Microservices, Backend, AWS, Agile, SQL and NoSQL.

WORK EXPERIENCE

Freshworks

Senior Software Engineer **Jan 2022 – Present**

- Designed and developed various features in CRM using Ruby on Rails following design principles with TDD approach using RSpec. Met product team functional requirements, scalability and performance.
- Implemented Sales and Territory hierarchy with role-based access control on dependent modules.
- Developed role-based access control feature in FreshSales, FreshChat, and FreshMarketer Microservices using Kafka via Event driven Publisher-subscribe design pattern.
- Worked on Subscription/Payment management using Orchestration pattern on User addition.
- Integration of third-party apps web hooks such as Shopify, Woocommerce in CRM marketplace.
- Optimized user list page performance by 60% through Redis and Elasticsearch caching.
- Automated translations using Crowdin and Jenkins.
- Hands on experience in Sidekiq for batch processing.
- Migration from ElasticSearch to OpenSearch, Rails 3 to Rails 4.2.
- Configured AWS EC2 and RDS , monitored and resolved spikes and alerts in Grafana in during on-calls.
- Mentored juniors and collaborated with cross team engineering/ product teams.

Caratlane

Software Engineer II **Jun 2019 – Dec 2021**

- Worked on various e-commerce features such as Gifting, Try at home, savings scheme and enabling internationalization in Mobile Apps with flexible configs using Ruby on Rails and Node.js.
- Done code level optimization in Order microservice and attained 25% performance gain.
- Migrated order service from monolithic architecture to Microservices architecture using Node.js and GraphQL.
- API integration of third party tool(Kissflow) for reverse flow(Returns, Refunds) business cases.

Caratlane

Software Engineer **Nov 2018 – May 2019**

- Developed REST APIs on order tracking and Shaya product using Ruby on Rails.
- Created Low Level Design including sequence diagrams and class diagrams to understand the existing features and new customizations.
- On-call support on ERP to Magento product syncing, discount and rate changes.
- Solved API dependencies in other teams by automated tasks, configuration pages using ActiveAdmin and content management using Strapi.
- RSpec Unit testcases automation using Jenkins via Github web hook.

Intel

Graduate Technical Intern **May 2017–Nov 2017**

- Worked on optimizing library for analysis of pre-silicon tracker data in C++.
- Migrated application to newer MySQL version supporting embedded mode.
- Attained performance gain by 30% by optimizing and tuning MySQL.

EDUCATION

Coimbatore Institute of Technology || Coimbatore, India

M.Sc Software Systems (*Integrated* Masters)

PROJECTS

Simple Rule based system for crop management

- Developed a Java application for crop disease prediction and prevention alerts based on weather data.
- Technologies: Java, MongoDB, OpenWeatherMap API.

ACHIEVEMENTS

- Outstanding Contributor Award for Interstellar project, Freshworks.
- Hackathon Winner: "Game of Nodes" at Caratlane

VISA STATUS

- Currently on L2S visa and legally permitted to work in US. No sponsorship required.
