Taher Abdul
Email id: tahair827@gmail.com
Phone: 312-598-6164
Location: San Francisco, CA

With over 9 years of experience in DevOps and Cloud technologies such as Google, Azure, and AWS, specialize in delivering top-tier DevOps practices. My expertise includes automating the build, test, and deployment cycles within agile methodologies. I am proficient in a wide array of DevOps tools, including source (version) control, build management, configuration management, monitoring, and log management.

Professional Summary:

- Experience in design & implementation both in Infrastructure-as-a-Service (IaaS), Platform-as-a-Service (PaaS), and Automation Testing.
- Experience with DevOps essential tools like Chef, Ansible, Docker, Kubernetes OpenShift, Jenkins, Hudson, ANT/Maven.
- Having experience in the Redhat Linux platform.
- Implemented version control systems like Subversion, and GIT and Implemented Source code management client tools like Visual SVN, Tortoise SVN, CVS, Perforce, and GIT
- Installed, configured, and managed the ELK (Elastic Search, Log Facilitated Scrum ceremonies like Sprint planning, retrospectives, Daily stand-ups, etc. Stash and Kibana) for Log management within EC2/ Elastic Load balancer (ELB) for Elastic search.
- Well-versed with Big data on AWS cloud services i.e., EC2, S3, Glue, Athena, DynamoDB and RedShift
- Experienced in implementing **firewall** and system security concepts such as SSH, iptables
- Implemented Dynatrace on different cloud technologies like AWS, Azure, and GCP. Implemented on Dynatrace APM end-to-end implementation
- Expertise in Bitbucket, Bamboo, AWS, Terraform, and Microservices.
- Expertise managing Amazon Web Services (AWS) and implementing solutions using EC2, S3, and RDS with CloudFormation JSON templates, EBS, Elastic Load Balancer, Auto Scaling Groups, Auto Scaling Launch Configuration, and Auto Scaling Lifecycle Hooks.
- Proficient with AWS CloudWatch, CloudFormation, CloudTrail Services, and CloudFront for setting up and managing cached content delivery.
- Expertise in DevOps/Agile operations process and tools area (Code review, unit test automation, Build and Release automation, Environment, Service, Incident, and charge Management).
- Created Measures and business transactions in Dynatrace to explore custom dashboard requirements more.
- Good hands-on knowledge of Configuration Management and Deployment tools like **Puppet, Ansible, Chef, Terraform, and Octopus Deploy**
- Configured and managed Kubernetes clusters for development and production environments on GKE.
- Orchestrated AWS deployment services, streamlining continuous integration and continuous deployment (CI/CD) pipelines, which reduced release times by 50% and minimized downtime during updates.
- Implemented CI/CD pipeline with GitLab CI for continuous deployment to GKE clusters.
- Conducted regular security audits and vulnerability assessments to ensure compliance with best practices and industry standards.
- Running Terraform script for provisioned for GCP infrastructure system.
- Implemented RedHat Satellite Server for patch management and configured servers to receive patches from it.
- Implementing Nginx as ingress controller on Kubernetes and Horizontal Pod Autoscaler on Kubernetes.
- Experienced in using Jenkins pipelines to build microservices and push them to the Docker registry, followed by deployment to Kubernetes. Managed and created pods using Kubernetes, and built and maintained Docker container clusters on GCP (Google Cloud Platform) with tools like Linux, Bash, Git, and Docker.
- Expertise in creating Docker images using a Docker File, implementing Docker container snapshots, removing images, and managing Docker volumes.

- Hands-on experience in using various Hadoop distros (Cloudera (CDH 4/CDH 5), Hortonworks, Map-R, IBM Big Insights, Apache, and Amazon EMR Hadoop distributions.
- Utilizing Kubernetes, and Docker for the runtime environment of the CI/CD system to build, test deploy.
- Collaborated with DevOps and development teams to integrate AppDynamics into the CI/CD pipeline, ensuring continuous monitoring and rapid issue resolution.
- Extensively Worked with Scheduling, deploying, and managing container replicas onto a node using Kubernetes and experienced in creating Kubernetes clusters work with Helm charts running on the same cluster resources.
- Expertise with Bitbucket/Bamboo/AWS/Terraform, Microservice.
- Implemented with Docker and Kubernetes on multiple cloud providers, from helping developers build and containerize their application (CI/CD) to deploying either on public or private cloud.
- Experience with Amazon Web services (AWS) and implemented solutions using EC2, S3, and RDS in cloud formation JSON templates, EBS, Elastic Load Balancer, Auto Scaling Groups, Auto Scaling Launch Configuration, and Auto Scaling Lifecycle Hooks.
- Experience with AWS Cloud Watch, Cloud Formation, Cloud Trail Services, and Cloud Front to set up and manage the cached content delivery.
- Experienced in DevOps/Agile operations process and tools area (Code review, unit test automation, Build & Release automation, Environment, Service, Incident and charge Management).
- Experience in using Bug-tracking tools like JIRA, Remedy, HP Quality Center, and IBM ClearQuest.
- Excellent communicative, interpersonal, intuitive, analytic, and leadership skills with the ability to work efficiently in both independent and teamwork environments.

TECHNICAL SKILLS:

OPERATING SYSTEMS	WINDOWS XP/VISTA/7/8/10, LINUX (RHEL, UBUNTU) REDHAT.
VERSION CONTROL SYSTEM	GIT, GITHUB, SUBVERSION(SVN)
CI TOOLS	JENKINS, ANT, MAVEN, TEAMCITY
CLOUD(IAAS PROVIDERS)/TECHNOLOGIES	AWS (EC2, S3, VPC, SNS, ROUTE53, CLOUDWATCH, DYNAMODB, IAM, LAMBDA), IAAS, PAAS, MICROSOFT AZURE, GOOGLE CLOUD PLATFORM(GCP)
CONFIGURATION MANAGEMENT TOOLS	CHEF, PUPPET, ANSIBLE
INFRASTRUCTURE MANAGEMENT TOOLS	PAGERDUTY, ZABBIX
VIRTUALIZATION TOOLS	VISUAL STUDIO 2008/2010, ORACLE VIRTUAL BOX
SDLC	AGILE, SCRUM, WATERFALL
CONTAINERS	DOCKER, KUBERNETES(EKS, AKS, GKE)
REPOSITORY MANAGEMENT	NEXUS, JFROG ARTIFACTORY
BUG TRACKING TOOLS	JIRA, REMEDY, HP QUALITY CENTRE, IBM CLEAR QUEST, MINGLE
WEB/APPLICATION SERVERS	APACHE, TOMCAT, JBOSS, NGINX
LANGUAGES/SCRIPTING	C/C++, JAVA, GO(GOLANG), PYTHON, SHELL, .NET, PL/SQL
WEB TECHNOLOGIES	JDBC, JSP, HTML, JAVA SCRIPT, XML
DATABASES	ORACLE, TFS, SQL SERVER, MYSQL, DB2

EDUCATION:

MASTER OF COMPUTER SCIENCE -NORTHWESTERN POLYTECHNIC UNIVERSITY, 2015
BACHELORS IN COMPUTER SCIENCE, JNTU, 2012

WORK EXPERIENCE

Wells Fargo, Concord, CA Sept 2024 - Present

Sr. GCP Cloud Engineer
Responsibilities:

- Worked on Google Cloud Platform (GCP) services like Compute Engine, Cloud Load Balancing, Cloud Storage, Cloud SQL, Stackdriver Monitoring, and Cloud Deployment Manager.
- Deployed and managed core GCP services like **Compute Engine**, **Cloud Load Balancing**, **Cloud Storage**, **Cloud SQL**, **Stackdriver Monitoring**, and **Cloud Deployment Manager** to enable highly scalable, resilient applications.
- Enhanced performance and reduced latency by setting up **GCP Firewall rules** and implementing **Cloud CDN** to efficiently cache and deliver content.
- Designed and deployed **GKE clusters** and associated resources (VPCs, Subnetworks) for various environments using **Terraform**, ensuring streamlined and automated cloud infrastructure provisioning.
- Utilized **Terraform** to automate infrastructure creation and management across different environments, including **QA**, **Staging**, and **Production**.
- Automated the provisioning of cloud resources (VMs, networks, Kubernetes clusters, and database services) using **Terraform** and integrated it with **GitHub Actions** for continuous integration and deployment.
- Developed reusable Terraform modules for the rapid setup of custom VPCs, IAM policies, and security configurations, ensuring consistency across environments.
- **ServiceNow** with **Terraform** to automate infrastructure provisioning and changes directly from the ServiceNow platform, enabling efficient incident tracking and change management
- Worked on automating ticket creation and issue resolution workflows in **ServiceNow** by linking cloud infrastructure management with the platform, providing better visibility into cloud resource statuses and incidents.
- Utilized **ServiceNow** for incident management, problem tracking, and ensuring compliance with change management processes in cloud operations.
- Implemented **Docker** containerization for microservices and managed the orchestration of containers using **Kubernetes**. Designed auto-scaling clusters and deployed containers using **kubectl** and Helm
- Created multi-pod replication strategies and managed containerized applications using **Kubernetes Replication Controllers** and **Kubernetes Dashboard** for efficient monitoring and management. Integrated **Docker** with **Jenkins** pipelines to automate the build and deployment of containerized applications, ensuring a seamless flow from development to production.
- Developed robust **Jenkins pipelines** for building, testing, and deploying applications across multiple environments, integrating with **Google Container Registry (GCR)** for streamlined image management.
- Automated cloud infrastructure deployments and updates using **Terraform**, ensuring reliable and repeatable provisioning of cloud resources.
- Set up GCP Firewall rules to allow or deny traffic to and from VM instances based on specified configurations and used GCP Cloud CDN (Content Delivery Network) to deliver content from GCP cache locations, drastically improving user experience and latency.
- Developed Jenkins pipelines with multiple stages, including building, testing, and deploying applications.
- Managed Docker orchestration and containerization using Kubernetes.
- Wrote and maintained **CI/CD pipelines** with **GitHub Actions**, **Jenkins**, and **Terraform** to enable fast, efficient deployments across environments with minimal downtime.
- Secured cloud network resources by enforcing best practices for **identity management** (IAM), **VPN configurations**, and **public/private network segmentation**.
- Integrated **ServiceNow** with monitoring tools to automatically generate incidents based on defined thresholds and system anomalies, improving response times and troubleshooting efforts.
- Collaborated on setting up and maintaining secure **Active Directory** integrations for GCP environments, enforcing **role-based access controls (RBAC)** and using **ServiceNow** for change tracking and incident management.
- sed **ServiceNow** for project management, tracking service requests, incidents, and changes, ensuring smooth collaboration with stakeholders throughout the development cycle.

Environment: GCP, Python, GKS, Terraform, Kubernetes, Docker, OpenShift, Helms, Jenkins, GitHub, Linux, GIT, Vault, Grafana, ELK Artifactory, MySQL, MongoDB, Docker, Maven, Kubernetes, google cloud engine,

Jira, Splunk.

SiriusXM, Dallas, TX Dec's 2021- Aug 2024

Sr. AWS Cloud Engineer/GCP

Responsibilities:

- Leveraged **AWS** cloud services such as **EC2**, **auto-scaling,** and **VPC** to build secure, highly scalable, and flexible systems that handled expected and unexpected load bursts.
- Designed and implemented scalable and secure cloud infrastructure using **AWS** services like EC2, VPC, Auto-Scaling, IAM, Route 53, S3, RDS, DynamoDB, Redshift, CloudFront, CloudTrail, CloudFormation, Lambda, and Kinesis.
- Managed and provisioned **AWS**, **GCP**, and **Azure** resources using **Terraform**, **CloudFormation**, **Ansible**, and **Packer**.
- Built and configured virtual data centers using **VPC**, subnets, NAT gateways, route tables, security groups, and ELB to host enterprise data warehouse and application platforms.
- Automated provisioning, configuration, and deployments using **Terraform**, **Ansible**, and **Jenkins**, reducing deployment time and human error.
- Managed containerized applications with **Docker**, **Kubernetes (EKS, GKE, OpenShift)**, and **Helm**; implemented CI/CD pipelines integrating Kubernetes and cloud platforms.
- Created reusable Terraform modules and Helm charts for standardizing infrastructure and deployment processes across environments.
- Developed and managed end-to-end **CI/CD pipelines** using **Jenkins**, **GitHub Actions**, **GitLab CI**, **TeamCity**, and **Octopus Deploy**.
- Integrated CI/CD workflows with **Terraform**, **Ansible**, **Helm**, and **Docker** for full-stack deployments including infrastructure, APIs, and frontend services.
- Automated builds and deployments for over 200 applications across environments, ensuring version control, rollback capabilities, and fast feedback.
- Developed scripts in **Python**, **Shell**, **Ruby**, and **Groovy** for automation of deployments, monitoring, and configuration management.
- Utilized **Postman**, **Newman**, and custom scripts to test and validate **REST**, **SOAP**, and **GraphQL** APIs during development and deployment.
- Created collections, environments, and automated API testing scripts integrated into CI/CD pipelines.
- Developed real-time telemetry data APIs for IoT platforms and validated data ingestion using Postman.
- Designed scalable UI automation frameworks using **Selenium**, **Cypress**, **Playwright**, with integrations to **JUnit**, **TestNG**, and **BDD tools like Cucumber**.
- Automated UI testing for microservices-based apps, integrated into CI/CD pipelines using Jenkins and AWS Code Pipeline.
- Implemented monitoring and alerting using **Prometheus**, **Grafana**, **Nagios**, **Splunk**, **ELK Stack**, and **AWS CloudWatch**.
- Managed network and system security including SSH, firewall rules, VPNs, Nginx (as reverse proxy/load balancer/WAF), and DDoS mitigation.
- Designed and maintained **ETL pipelines** using **AWS Glue**, S3, and Redshift for high-volume data processing and analytics.
- Optimized Redshift performance with query tuning and compression techniques.
- Managed and monitored **MySQL**, **MongoDB**, **Oracle**, and **DynamoDB** instances in cloud environments.
- Managed Linux systems infrastructure, including provisioning, upgrades, patching, and performance tuning.
- Configured services like **HTTP(S)**, **SSH**, **NFS**, **DNS**, **SFTP**, and **NTP** on Linux servers.
- Monitor systems and network performance using BMC Netcool, tcpdump, NetFlow, Wireshark, and Nagios.
- Implemented solutions for monitoring and alerting using Nagios, Splunk, and CloudWatch

- Monitored system performance and logs using CloudWatch and ELK stack to ensure system reliability.
- Experience in the configuration of networking services including HTTP(S), SSH, NFS, DNS, SFTP, NTP, etc.
- Conducted performance tuning and optimization of EKS clusters to ensure high availability and resilience.

Environment: AWS, Redhat, Elastic Search, MySQL, Apigee, Mongo DB, Oracle, Groovy, Bash, Python, Boto3, EKS, Terraform, Kubernetes, Docker, OpenShift, NO-SQL, Jenkins, GitHub, Linux, GIT, Maven, Tomcat, Apache, Web-sphere, Puppet, Ansible, Splunk, Consul, Nexus, RHEL, shell.

American Family Insurance, Madison, WI — Jan 19 – Nov 2021

Sr. Azure Cloud Engineer

Responsibilities:

- Designed and implemented a patching process with Ansible playbooks for OpenShift, RHEL, and Atomic OS and developed a bug fix for OpenShift.
- Designed and executed robust patching frameworks using **Ansible playbooks** for **Red Hat Enterprise Linux (RHEL)**, **Atomic OS**, and **OpenShift**, reducing manual patching time by over 50%.
- Built fully automated deployment environments using **Terraform** and **Ansible**, enabling fast, reproducible infrastructure provisioning across multiple cloud platforms.
- Developed scalable, modular Terraform configurations to manage complex environments including **multi-region** AWS/GCP deployments.
- Automated cloud provisioning workflows and service integrations using **Azure PowerShell**, **CLI**, and **Terraform**, aligning with organizational infrastructure-as-code best practices.
- successful **migrations from on-premise to Azure cloud**, leveraging Azure stack automation services to configure and deploy resources using ARM templates and scripting tools.
- Designed secure and scalable **virtual networks**, integrated **Azure Key Vault** for secure secrets management, and implemented **Azure Policy** for governance.
- Oversaw infrastructure operations across **Azure**, **AWS**, and **GCP**, optimizing storage, networking, compute, and cost allocation strategies.
- Built and deployed **disaster recovery solutions** across cloud environments, leveraging services such as **Azure Recovery Services Vault**, **AWS Backup**, and **GCP snapshots**.
- Developed end-to-end **CI/CD pipelines** using tools like **Jenkins**, **Azure DevOps**, **TeamCity**, **Octopus Deploy**, **AWS CodeBuild**, and **GCP Cloud Build**.
- Integrated **automated security scans**, unit tests, and performance checks into pipelines, improving release quality and deployment frequency.
- Streamlined software delivery by containerizing applications and implementing **rolling deployments**, **blue-green deployments**, and **canary releases** within Kubernetes.
- Migrated and containerized legacy monolithic applications using **Docker**, deploying them to **OpenShift** and **Kubernetes (AKS, EKS, GKE)**.
- Deployed and maintained Kubernetes clusters using **Azure Kubernetes Service**, implementing **RBAC**, **network policies**, **node pools**, and **auto-scaling** mechanisms.
- Set up **Azure Container Registry (ACR)**, Docker Compose workflows, and integrated them into pipelines for secure image distribution.
- Implemented **Infrastructure as Code (IaC)** provisioning of Kubernetes clusters, reducing deployment time and error rates.
- Deployed comprehensive monitoring solutions using **Prometheus**, **Grafana**, and **ELK Stack** to track resource utilization, application logs, and system health metrics.
- Installed and configured **Splunk Enterprise** and **AppDynamics** agents across hybrid environments to enable proactive monitoring and alerting.
- Configured **Azure Monitor** and **Azure Diagnostics** to log key metrics and performance indicators across compute, networking, and application services.
- Integrated **New Relic** and custom dashboards for business-critical monitoring with SLA reporting and incident response alerting.
- Designed and enforced **cloud security architecture**, implementing **PKI**, **RBAC**, **IAM**, and **policy-based governance** across Azure.
- Deployed **Azure AD Connect** with **ADFS** for secure identity federation between on-premises and cloud.

- Conducted vulnerability scans and managed remediation strategies using **Qualys**, **Azure Security Center**.
- Created and optimized ETL workflows for structured data pipelines, translating business rules into performant and compliant transformation logic.
- Migrated critical workloads from **on-prem SQL Server** to **Azure SQL Database**, using the **SQL Azure Migration Wizard**.
- Developed **Python APIs** for data ingestion into **Azure Blob Storage**, improving real-time access to monitoring data.
- Facilitated cross-functional collaboration with application developers, QA teams, and system administrators to align CI/CD and infrastructure strategies.
- Configured and maintained **Nexus Repository Manager** for secure sharing of Maven, npm, and Docker artifacts.
- Set up and managed **Azure Scheduler**, **Notification Hub**, **Batch Services**, and **IoT Hubs** for event-driven computing and background job automation.
- Maintained source code integrity, branching strategies, and version control processes using **Git** and **Bitbucket**.
- Authored robust internal documentation covering automated processes, system configuration, and cloud infrastructure best practices.
- Implemented Azure Kubernetes service to deploy a managed Kubernetes cluster in Azure and created an AKS cluster in the Azure portal, with the Azure CLI, also Implemented template-driven deployment options such as Resource Manager templates and Terraform.
- Automated AKS cluster provisioning using Infrastructure as Code (IaC) tools such as Terraform.
- Maintained and coordinated environment configurations, code integrity, and code conflict resolution.
- Created Terraform modules for reusable infrastructure components, ensuring consistency and reliability.
- Implemented monitoring and logging solutions with Prometheus, Grafana, and the ELK Stack, improving system observability and incident response times.
- Established and applied appropriate branching, labeling/naming conventions using GIT source control.

Sun Trust Bank - Atlanta GA Mar 2017 – Dec 2018

Cloud Engineer

Responsibilities:

- Pioneered Architecting Multi AZ Components in AWS like EC2, IAM, VPC, RDS With Replication, S3 for Object and Static Webpages, and Autoscaling of Micro Services like ECS, ELB with SSL Certs.
- Pioneered changing the configuration of the ELB or Route 53 to achieve the Blue-green deployment strategies by developing scripts in Python Boto3 to automate this process.
- Experienced in AMI's volume snapshots, and RDS snapshots and performed LAMP installation and configuration on Ubuntu, Redhat, and Amazon Linux EC2 instances.
- Developed Cloud Formation templates to develop a complete Stack on AWS using services like EC2, RDS, S3, EBS, Cloud Watch, SNS, SQS, and Cloud Trail. Developed Python scripts to pass in user data when creating the AMI to install services in the Boot time.
- Developed Ansible Playbooks using YAML scripts for launching different EC2 virtual servers in the cloud using Auto-scaling and Amazon Machine Images (AMI).
- Configuring, automation, and maintaining build and deployment CI/CD tools git/git-Lab, ANT, Jenkins, Maven, Docker-registry/daemon, Nexus, and JIRA for Multi-Environment with high degrees of standardization for both infrastructure and application stack automation in AWS cloud platform.
- Implemented and managed cloud infrastructure using Terraform and AWS CloudFormation, automating the deployment of complex architectures
- Extensively used Data warehouse ETL Informatica methodology in testing for supporting data extraction, transformations, and loading processing, in a corporate-wide-ETL solution using ETL tools like Informatica.
- Created Ansible Playbooks in Ansible Tower and integrated Ansible Tower with Jenkins to deploy code to different servers. Met with the EMR Core Team on implementation strategies and critical components.
- Implemented Python Boto 3 to configure the services AWS glue, EC2, S3

- Wrote Ansible Playbooks for installing JBoss, WebLogic, Nginx, and WebSphere for configuring load balancers and failover.
- Integrated Terraform with Ansible, and Packer to create and Version the AWS Infrastructure, code deployment, and orchestration with tools such as Puppet, Chef, Cloud Formation, and automation validation using Test Kitchen, Ansible, and Terraform.
- Terraform template to create Load balancers, and EC2 instances with auto-scaling and monitoring on the fly for different environments. Creating an AWS RDS MySQL DB cluster and connecting to the database through an Amazon RDS MySQL DB Instance using the Amazon RDS Console.
- Developed terraform scripts to build, change, and version infrastructure as code using AWS as a provider and launch a multi-tiered stack to be provisioned and configured with terraform scripts.
- Installed and configured Jenkins with SonarQube and GIT by installing GIT plugins and building the artifacts SonarQube for static and dynamic code analysis using the Maven automation tool and storing the build artifacts into Nexus repository and deploying it to WebSphere/Tomcat server.
- Implemented Jenkins, pipelines to drive all microservices builds out to the Docker registry and deployed to Kubernetes, Created Pods and managed using Kubernetes. Also configured the Kubernetes cluster and facilitated its running on top of the CoreOS.
- Deployed Kubernetes Cluster on AWS, and VMWare using MiniKube, and Kubespray, performed the deployments of the Docker images onto the clusters by updating the Labels and selectors in the Pod definition. Managed the implementation team to coordinate installation, template/table development, interface efforts, training, roll-out dates, and ongoing support for EPM/EMR.
- Expertise in deploying Azure AD connects, and configuring ADFS installation using Azure AD connects.
- Configured Azure Key vault and key management policies.
- Implemented Chef for configuration management of hosted Instances within GCP.
- Monitored the applications on IBM WebSphere application server and integrated configuration of web apps with WebSphere, Facilitated the migration of applications from WebSphere 7.0 to 8.5.
- Environment: Git, Bitbucket, Terraform, Docker, Chef, Jenkins, Ansible, Tomcat, Shell, EMR, AWS, glue, Cloud bolt, Rally, Linux.

  Environment: Jenkins, Bamboo, Ansible, CHEF, AWS, EMR, Docker, SVN, GIT, Shell, Python, Splunk, Restful API, Scrum, VMware, DynamoDB, RedShift, Terraform, Quality Assessment, Glue, Tomcat, Shell, Perl, Nexus, Splunk, Nagios, Nginx, AppDynamics.

Affinity Health Plan, NY Jan' 2016 – Feb' 2017

Java Developer

Responsibilities:

- Facilitated the Analysis and Design of the project, which is based on SpringMVC Architecture and Design patterns.
- Developed UI pages using JSP, HTML, JQuery, CSS, and AJAX.
- Wrote JavaScript for client-side validation.
- Implemented Eclipse for writing JSPs, Struts, and other Java code snippets.
- Developed Controller Servlets, Action, and Form objects for interacting with the Oracle database and retrieving data.
- Wrote custom support modules for upgrade implementation using PL/SQL, and UNIX.
- Developed activity, sequence, and class diagrams using Unified Modeling Language (UML) and Rational Rose.
- The Application was deployed on the Apache Tomcat Server.
- Implemented Junit framework for Unit testing.
- Monitored the logs using Log4J and fixed the problem.
- Implemented CVS for version control code Implemented by developers and Developed J-Unit test cases for all developed modules.

Environment: Java, JavaScript, JSP, HTML, AJAX, XML, DOM, SAX, JNDI, Struts, PL/SQL, UNIX, Rational Rose, Apache Tomcat, EMR, Oracle, JUnit, ANT, Log4j, CVS, Eclipse.
