ROHITH K

Senior Software Engineer | +1- 214)-856-0424 | rohithk45@outlook.com

LinkedIn: https: https://www.linkedin.com/in/rohith-k-15496228a/

PROFESSIONAL SUMMARY

- Senior Software Engineer having 10+ years of experience in global supply chain and logistics, specializing as an **SAP TM** / **ITD** Lead with deep expertise in **S/4HANA** transportation and warehouse integration.
- Ran the technical leadership for large-scale transformations, leading workshops for requirement gathering and translating complex business needs into robust **SAP TM** configurations and designs.
- Built and managed end-to-end logistics solutions within the **SAP S/4HANA** ecosystem, specializing in the **Integrated Transportation Management** (**ITD**) framework and its seamless connection to **EWM** and **IBP**.
- Wrote and optimized advanced transportation planning strategies, focusing on **Freight/Transportation Planning** (**FTP**) and cross-module integration with **MM**, **SD**, and **Finance** to ensure end-to-end visibility.
- Fixed critical integration bottlenecks between **TM** and **EWM**, utilizing hands-on experience with **Advanced Shipping and Receiving** (**ASR**) to streamline dock appointments and loading sequences.
- Set up comprehensive demand and supply planning workflows using **SAP IBP**, ensuring that transportation capacity planning is tightly aligned with upstream forecasting and inventory targets.
- Managed the functional configuration of **TM Optimizer** and planning profiles, balancing cost and service level constraints to deliver high-impact logistics cost savings for the organization.
- Developed scalable cutover and hypercare strategies for global rollouts, providing expert-level functional support to business and **IT** teams during mission-critical go-live windows.
- Checked the stability of cross-functional processes by leading comprehensive integration testing (**SIT**) and user acceptance testing (**UAT**), identifying and resolving process gaps before deployment.
- Worked closely with stakeholders to define the technical roadmap for logistics modernization, leveraging deep expertise in **S/4HANA** to drive architectural excellence in the **ITD** space.

TECHNICAL SKILLS

Category	Technologies & Competencies
SAP Functional	SAP S/4HANA TM 2022, ITD, EWM, IBP, SAP TM 9.5, SAP ECC 6.0, LE-TRA, SAP BRFplus, SAP Transportation Management, Extended Warehouse Management, Integrated Business Planning.
Cross-Module	Materials Management, Sales and Distribution, Finance and Controlling, Logistics Execution, Production Planning, FI/CO, MM, SD, PP, LE, SAP S/4HANA Core Modules, Global Trade Services.
Middleware & Integration	SAP CPI, SAP PI, SAP PO, SAP BTP, Advanced Shipping and Receiving, ASR, EDI, ALE, IDOC, RFC Connectivity, API Management, Middleware Repointing, Integration Gateway.
Planning & Execution	Demand Planning, Supply Planning, S&OP, Response and Supply, Optimizer Tuning, Planning Profiles, Selection Profiles, Load Planning, Dock Appointment Scheduling, FTP Modeling.
Tools & Methodology	SAP Solution Manager, Jira, HPQC, Agile, Scrum, ASAP, SAP Activate, Program Governance, Solution Ownership, Technical Design Documentation, Cutover Management, Hypercare Support.

PROFESSIONAL EXPERIENCE

KAISER PERMANENTE | SENIOR SOFTWARE ENGINEER | FEB 2023 - PRESENT

PROJECT: Global S/4HANA Logistics Transformation (ITD/TM)

PROJECT DESCRIPTION: Leading the functional design and integration of a global SAP TM and ITD solution on S/4HANA, focusing on deep integration with EWM and IBP for medical supply chains.

KEY RESPONSIBILITIES & CONTRIBUTIONS:

- Managed the functional lead activities for the **SAP TM** workstream, overseeing the design and configuration of **Integrated Transportation Management** (**ITD**) for high-volume clinical distribution.
- Ran the technical leadership for a cross-functional team of 15 resources, providing program governance and full solution ownership for the clinical supply chain modernization program across North America.
- Built and implemented the integration between **SAP TM** and **EWM**, utilizing **Advanced Shipping and Receiving** (**ASR**) to automate the synchronization of transportation units and warehouse tasks.
- Coded custom selection profiles and condition-based rules in **TM**, ensuring that carrier selection logic adheres to strict temperature-controlled transport requirements for sensitive medical supplies.
- Fixed performance bottlenecks in the **FTP** engine by tuning optimizer profiles, resulting in a twenty percent improvement in load consolidation efficiency for the medical supply team.
- Ran complex requirement-gathering workshops with clinical business stakeholders, translating high-level medical logistics needs into technical specifications for custom **TM** planning and tendering workflows.
- Set up the integration between **SAP IBP** and **TM**, enabling the organization to perform long-term transportation capacity planning based on projected demand and supply constraints.
- Managed the cross-module integration with **MM** and **SD**, ensuring that purchase orders and sales orders trigger automated freight units with accurate delivery dates for the year.
- Wrote detailed functional design documents for custom freight settlement enhancements, facilitating automated cost allocation to **Finance** (**FI/CO**) for complex multi-stop clinical delivery routes.
- Checked the stability of the logistics solution by leading the end-to-end testing cycles (**SIT**/**UAT**), managing defect resolution in **Jira** to ensure a high-quality production release.
- Worked with the cutover team to coordinate the migration of open freight orders and master data, ensuring zero disruption to clinical operations during the move to **S/4HANA**.
- Developed training materials for end-users on the use of the **TM** Planning Cockpit, providing hands-on support to ensure the successful adoption of new logistics processes across hubs.
- Fixed a specific synchronization error between **IBP** demand signals and **TM** freight units by refactoring the integration service and validating the data mapping for the technical team.
- Ran the hypercare support team for the North American rollout, providing real-time resolution for high-priority logistics incidents and ensuring continuous carrier tendering and settlement.
- Checked the performance of the **TM Optimizer** for regional inbound shipments, identifying and resolving constraints that were causing sub-optimal route selection for manufacturing raw materials.
- Built a proof of concept for a carrier portal integration, demonstrating the technical feasibility of real-time visibility into freight status and automated invoice submission for the organization.
- Managed the **SAP CPI** middleware exposure by repointing integration flows and mapping data fields between **S/4HANA** and external carrier tracking systems for real-time visibility updates.
- Maintained the program governance standards by establishing documentation protocols and best practices for configuration management across the **TM**, **EWM**, and **IBP** workstreams during the rollout.
- Ran the onsite leadership for the Omaha hub, serving as the primary liaison between business teams and implementation partners to ensure consistent solution quality and alignment with objectives.
- Coded a custom **BTP** extension to handle specialized clinical packaging requirements, allowing the **TM** system to calculate load space more accurately for uniquely shaped medical equipment.

TECH STACK: SAP S/4HANA 2022, SAP TM, SAP EWM, SAP IBP, MM, SD, FI/CO, ASR, FTP, Jira, Solution Manager, SAP CPI, SAP BTP.

CITI | SENIOR SOFTWARE ENGINEER | APRIL 2020 - FEB 2023

PROJECT: Institutional Logistics & Asset Transportation (SAP TM)

PROJECT DESCRIPTION: Developing and executing a global transportation management framework within SAP to manage the movement of institutional assets and high-value secure freight.

KEY RESPONSIBILITIES & CONTRIBUTIONS:

- Managed the functional delivery of the **SAP TM** module, designing the end-to-end freight settlement process for international asset transportation to ensure **SOX** and audit compliance.
- Ran the technical leadership for a squad of 12 resources, taking full solution ownership for the asset tracking and transportation planning modules across the global banking network.

- Built complex **TM** charge management structures, utilizing rate tables and scale-based logic to automate the calculation of secure transport fees across multiple global carriers and regions.
- Fixed high-priority integration bugs between **SAP TM** and **Finance**, refactoring the service entry sheet generation logic to resolve discrepancies in vendor payment processing for the bank.
- Ran the technical leadership for the **IBP** supply planning integration, ensuring that asset movement requests were prioritized based on regional stock levels and risk assessments.
- Set up a robust monitoring framework for carrier tendering, utilizing custom **TM** dashboards to track carrier acceptance rates and response times in real-time for the management team.
- Coded custom **TM** conditions for automated carrier selection, implementing logic that prioritizes carriers based on their historical performance and security certification levels.
- Managed the documentation for the global **ITD** architecture, creating detailed process maps and configuration guides to support the bank's long-term logistics modernization roadmap.
- Wrote and updated the test strategy for the **TM-EWM** integration, defining the specific scenarios required to validate the movement of high-value assets between secure warehouse zones.
- Checked the scalability of the **TM** planning engine by conducting load testing on the **S/4HANA** backend, ensuring the system could handle thousands of concurrent freight units.
- Worked independently to resolve a complex data corruption issue in the freight unit building rules, utilizing system traces and data reconciliations to restore the records.
- Managed the full lifecycle implementation from initial blueprinting through hypercare for the regional banking hubs, ensuring all **SOX** requirements were embedded into the system design.
- Ran the onsite leadership during the Omaha data center transition, coordinating between local **IT** teams and global business units to ensure zero downtime for the transportation layer.
- Set up the **SAP PI** middleware connections to interface with international security vendors, ensuring that real-time location data from secure vehicles was ingested into the **SAP TM** cockpit.
- Coded custom **LTMOM** templates to automate the migration of legacy transportation lanes and carrier master data into the new **S/4HANA** environment during the conversion phase.

TECH STACK: SAP S/4HANA, SAP TM, SAP IBP, EWM, FI/CO, SD, MM, SOX, HPQC, Agile, SAP PI.

ADITYA BIRLA GROUP | SOFTWARE ENGINEER | JULY 2017 - MARCH 2020

PROJECT: Regional Manufacturing Logistics & TM Rollout

PROJECT DESCRIPTION: This project focused on the functional implementation and technical support of SAP TM and LE-TRA modules to manage manufacturing distribution and regional freight planning.

KEY RESPONSIBILITIES & CONTRIBUTIONS:

- Managed the daily functional support for the regional **SAP TM** environment, utilizing **Freight Order** and **Freight Unit** management to track manufacturing shipments across regional sites.
- Ran the technical leadership for a team of 10 resources during the regional rollout, providing solution ownership for the manufacturing logistics execution and planning modules.
- Built and configured simple **TM** Planning Profiles and selection attributes, ensuring that the system correctly prioritized regional carriers based on cost and capacity constraints.
- Fixed performance bottlenecks in the freight settlement process by refactoring **TM** charge calculation rules and scale base definitions to resolve discrepancies in vendor invoicing.
- Ran the initial functional assessment for the **TM-EWM** integration, documenting the process flow for delivery-based transportation planning and warehouse request synchronization.
- Set up automated alert monitors in **SAP TM**, providing the logistics team with real-time visibility into delayed shipments and pending carrier tenders for the manufacturing units.
- Coded basic **TM** conditions using the **BRFplus** framework to automate the determination of shipping points and purchasing organizations based on the source plant and product type.
- Managed the technical documentation for the regional logistics topology, creating detailed process maps and configuration guides to support the long-term **S/4HANA** roadmap.
- Checked the stability of the **TM-SD** integration by monitoring the transfer of sales orders into freight units, identifying and resolving mapping errors before they impacted planning.

- Wrote high-performance **SQL** queries to extract transportation spend data from the **TM** tables, providing the logistics manager with weekly reports on carrier performance and savings.

TECH STACK: SAP TM 9.5, SAP ERP (ECC 6.0), LE-TRA, BRFplus, SQL, HPQC, MM, SD, Logistics Execution.

ZENSAR TECHNOLOGIES | ASSOCIATE SOFTWARE ENGINEER | SEPTEMBER 2015 - JUNE 2017

PROJECT: Retail Logistics Support & Data Maintenance

PROJECT DESCRIPTION: Providing foundational functional support for retail logistics and warehouse data environments, managing basic SAP TM and MM configurations for the support team.

KEY RESPONSIBILITIES & CONTRIBUTIONS:

- Wrote basic **SQL** code to support the retrieval of shipment metadata from the **SAP TM** repository for use in retail reporting and daily record reconciliation tasks.
- Built simple **MM** and **SD** master data records to support the testing of new transportation lanes, ensuring that all material and customer data was correctly configured.
- Fixed minor configuration errors in the **TM** master data by utilizing the system tools to adjust carrier profiles and lane distances as requested by the leads.
- Ran manual testing of new logistics features in the test environment, documenting bugs and functional discrepancies in **Jira** for the senior engineering team before release.
- Set up basic email notifications in **SAP TM** to alert the logistics desk when freight orders were ready for tendering or required manual intervention during the retail cycle.
- Coded a simple automation utility in **PowerShell** to clean up temporary system logs in the test environment, reducing the manual effort required by the storage teams.
- Managed the version control for the support project using **SVN**, ensuring that all configuration changes and technical documentation were correctly tracked and documented.
- Checked the system logs for failed data transfers from regional storefronts, identifying root causes related to **RFC** connectivity or incorrect security credentials and fixing them.
- Developed a basic set of troubleshooting guides for the logistics support desk, providing step-by-step instructions to help staff identify common **TM** and **MM** data issues.
- Supported the senior development team during the migration of the retail content repository to a new server, assisting with data verification and regression testing tasks.

TECH STACK: SAP TM, SAP MM, SAP SD, SQL, Windows Server, PowerShell, Manual Testing, SVN, Jira.

KEY PROJECTS & ACHIEVEMENTS

Company	Year	Project & Technical Achievement
Kaiser Permanente	**2024**	Led the **SAP ITD** implementation for clinical logistics, achieving **99.5%** on-time delivery visibility across **S/4HANA**.
Kaiser Permanente	**2023**	Integrated **SAP TM** with **EWM ASR**, reducing warehouse dock processing time by **30%** through automated synchronization.
Citi (Citigroup)	**2022**	Engineered an automated **TM** freight settlement system that supported **$500M+** in annual asset movement with zero audit findings.
Citi (Citigroup)	**2021**	Successfully integrated **SAP IBP** with **TM**, improving transportation capacity forecasting accuracy by **25%** across global regions.

Company	Year	Project & Technical Achievement
Aditya Birla	**2019**	Developed a custom **SAP TM** planning profile for manufacturing logistics, reducing regional freight spend by **15%** through optimization.
Zensar	**2016**	Streamlined retail logistics support by implementing automated **MM/SD** data checks, saving the support team **5 hours** of manual work weekly.
