Sandeep L
Senior .NET Developer
Email: sandeep.la0521@gmail.com
Phone No: + 1(571) 293-0287

Professional Summary:

Senior Full Stack .NET Engineer with 12+ years of experience designing and delivering scalable enterprise web applications using C#, .NET Core, ASP.NET Core, and modern cloud platforms (Azure & AWS). Proven expertise in microservices architecture, RESTful APIs, and service-oriented systems, with strong experience modernizing legacy monolithic applications into cloud-native, containerized solutions. Skilled in frontend development using Angular (v8–17+) and React (Hooks, Redux/RTK), building responsive and high-performance user interfaces integrated with secure backend services. Strong background in Entity Framework, SQL Server, and distributed messaging systems, with deep knowledge of Domain-Driven Design (DDD), CQRS, and event-driven architectures. Experienced in CI/CD pipelines, DevOps practices, and AI-assisted development tools for code generation, refactoring, and testing. Adept at leading development teams, mentoring engineers, optimizing performance, and delivering secure, high-availability enterprise solutions in Agile environments.

Key Highlights:

- Designed and delivered enterprise-grade web applications using C#, .NET Core/.NET 6–9, ASP.NET Core, ASP.NET MVC, Web API, and Blazor, building scalable, secure, and high-availability solutions across web, mobile, and SaaS platforms.
- Architected and implemented microservices and service-oriented architectures (SOA) using Domain Driven Design (DDD), CQRS, and event-driven patterns, improving scalability, maintainability, and system performance.
- Built and integrated RESTful and SOAP Web Services and GraphQL APIs, enabling seamless integration with Salesforce, Dynamics 365, and enterprise third-party systems using OAuth2, JWT, and RBAC security models.
- Developed modern frontend applications using Angular (v8–17+), React (Hooks, Redux/RTK), JavaScript, TypeScript, HTML5, CSS3, SCSS, and Bootstrap, implementing responsive UI/UX and reusable component architectures.
- Designed and deployed cloud-native applications on Microsoft Azure using App Services, Azure Functions, Azure API Management, and Azure Storage, enabling scalable and highly available enterprise services.
- Implemented event-driven and messaging architectures using RabbitMQ, Azure Service Bus, AWS SNS/SQS, and NServiceBus, enabling asynchronous communication and highly resilient distributed systems.
- Designed and optimized database solutions using SQL Server, T-SQL, Oracle SQL, MongoDB, DynamoDB, Cosmos DB, and MySQL, leveraging Entity Framework Core, ADO.NET, Dapper, LINQ, and stored procedures for high-performance data access.
- Built containerized cloud-native applications using Docker, Kubernetes (AKS/EKS), and ECS Fargate, deploying scalable microservices with CI/CD pipelines using Azure DevOps, GitHub Actions, TeamCity, and Octopus Deploy.
- Implemented cloud-based architectures on Microsoft Azure and AWS, utilizing Azure Functions, AWS Lambda, App Insights, CloudWatch, and monitoring tools to ensure high availability, observability, and operational efficiency.
- Developed cross-platform mobile and web applications using Xamarin Forms, .NET MAUI, Angular, and React, enabling seamless functionality across Android, iOS, and modern web platforms.
- Led Agile/Scrum development processes, participating in sprint planning, backlog grooming, code reviews, mentoring developers, and technical leadership, ensuring adherence to coding standards, scalability, and best engineering practices.
- Implemented test-driven development (TDD) and automated testing using NUnit, unit testing, integration testing, and CI automation, improving code quality, reliability, and release stability.
- Leveraged AI-assisted development tools (GitHub Copilot, LLM-based coding assistants) for code generation, refactoring, documentation, and automated test creation, accelerating development productivity and improving engineering workflows.

Technical Skills:

Programming Languages: C#, .NET 6/8/9, VB.NET, JavaScript, TypeScript, LINQ, PL/SQL, T-SQL

Backend & Web Technologies:	ASP.NET Core, ASP.NET MVC, Web API, RESTful Services, SOAP Web Services, Blazor, Windows Services, Microservices Architecture, Service-Oriented Architecture (SOA)
Frontend Technologies:	Blazor (Server & WebAssembly), Angular (v4–17+), React (Hooks, Context API, Redux/RTK), JavaScript, TypeScript, HTML5, CSS3, SCSS/SASS, Bootstrap, jQuery, Angular Material, PrimeNG, Kendo UI
UI/UX & Design:	Responsive Web Design, Progressive Web Apps (PWA), Accessibility (WCAG, ARIA), Component-Driven Design, Figma, Storybook
Database & Data Technologies:	SQL Server, PostgreSQL, Cassandra, Snowflake, MongoDB, DynamoDB, Cosmos DB, MySQL, T-SQL
ORM & Data Access:	Entity Framework Core, ADO.NET, Dapper, LINQ, SSIS
Cloud Platforms:	Microsoft Azure, AWS (EC2, Lambda, API Gateway, DynamoDB, RDS), Serverless Architecture, Azure Functions
DevOps & CI/CD:	Azure DevOps, GitHub, GitHub Actions, CI/CD Pipelines, Docker, Kubernetes (AKS/EKS), ECS Fargate, Octopus Deploy, TeamCity, Continuous Integration, Continuous Delivery
Messaging & Integration:	RabbitMQ, Azure Service Bus, AWS SNS/SQS, NServiceBus, REST API Integration, GraphQL APIs, Enterprise System Integration
Testing & Quality Assurance:	Unit Testing, Integration Testing, Test-Driven Development (TDD), NUnit, Automated Testing, Code Quality Reviews
Security:	OAuth2, JWT Authentication, RBAC, Secure API Development, OWASP Secure Coding Practices
Architecture & Design Patterns:	Clean Architecture, Domain-Driven Design (DDD), CQRS, Event-Driven Architecture, SOLID Principles, N-Tier Architecture, Distributed Systems, Scalability & Performance Optimization
AI-Assisted Development:	GitHub Copilot, Cursor IDE, ChatGPT, LLM-based Development Tools, AI-assisted Code Generation, Automated Test Creation, AI-driven Code Refactoring
Development Tools & Collaboration:	Visual Studio 2017–2022, Visual Studio Code, Git, Azure Repos, TFS, NuGet, Postman, Jira, Confluence
Methodologies:	Agile, Scrum, Sprint Planning, Backlog Grooming, Continuous Improvement

Certifications:

Microsoft Certified Azure Developer
Microsoft Certified Associate

Professional Experience:

Senior .NET Developer **Apr 2025 - Present**
Client: Capital One, Plano, TX
Responsibilities:

- Designed and developed scalable microservices and RESTful APIs using .NET 9, ASP.NET Core, and C#, supporting enterprise banking platforms including digital banking, transaction processing, and internal financial systems.
- Architected cloud-native backend services using Microsoft Azure (App Services, Azure Functions, Azure API Management) enabling highly available and scalable financial services applications.
- Implemented event-driven architecture using Azure Service Bus and messaging patterns, enabling asynchronous communication between distributed microservices handling payments, customer accounts, and financial transactions.
- Developed secure banking integrations with internal systems and third-party financial services using REST APIs, OAuth2, JWT authentication, and API Gateway security policies.
- Built high-performance data services using Entity Framework Core, Dapper, SQL Server, and DynamoDB, optimizing database queries and stored procedures for high-volume financial transactions.
- Containerized microservices using Docker and Kubernetes (AKS) enabling scalable deployments and high availability across cloud environments.
- Designed and optimized PostgreSQL database queries and stored procedures supporting high-volume microservices transactions and improving data retrieval performance.

- Developed interactive web UI components using Blazor Server and Blazor WebAssembly, enabling fast, component-based front-end development integrated with .NET backend services.
- Optimized Blazor rendering performance and state management, improving UI responsiveness for enterprise financial dashboards handling large datasets.
- Developed responsive frontend applications using React.js, JavaScript, HTML5, and CSS3, building reusable UI components and integrating with secure REST APIs for internal banking dashboards.
- Implemented CI/CD pipelines using Azure DevOps and Git, automating build, testing, and deployment workflows to support continuous delivery of enterprise applications.
- Integrated observability and monitoring using Azure Monitor, Application Insights, and Log Analytics, improving application reliability and proactive issue detection.
- Implemented Cassandra for distributed data storage in microservices environments, enabling scalable and fault-tolerant handling of large datasets.
- Built reusable internal service libraries and SDKs, standardizing API integration patterns across engineering teams.
- Implemented automated testing frameworks including unit tests, integration tests, and API tests using Postman/Newman, ensuring reliable and stable production releases.
- Participated in technical architecture discussions and design reviews, collaborating with architects, product managers, and engineering teams to deliver scalable enterprise banking solutions.
- Enforced secure coding practices and OWASP guidelines, performing static code analysis using Fortify and addressing security vulnerabilities.
- Leveraged AI-assisted development tools (GitHub Copilot and LLM-based coding assistants) for code generation, refactoring, documentation, and test automation.
- Partnered with DevOps and platform teams to improve container orchestration, infrastructure automation, and cloud deployment strategies.
- Mentored junior developers, conducted code reviews, and provided technical guidance, improving engineering standards and development productivity.

Environment: .NET 9, ASP.NET Core, C#, Web API, Microservices, REST APIs, Entity Framework Core, Dapper, SQL Server, PostgreSQL, DynamoDB, React.js, Blazor Server/WebAssembly, HTML5, CSS3, JavaScript, Azure (App Services, Azure Functions, API Management, Service Bus, Application Insights), Docker, Kubernetes (AKS), Azure DevOps, Git, CI/CD, OAuth2, JWT, Fortify, Postman/Newman, Agile/Scrum.

Senior .NET Full Stack Developer **Aug 2023 – Mar 2025**
Client: AutoZone, Memphis, TN
Responsibilities:

- Designed and developed high-performance microservices and RESTful APIs using .NET 8/.NET Core, ASP.NET Core, and C#, supporting enterprise retail platforms including inventory management, order processing, and customer service integrations.
- Architected cloud-native backend services on AWS (ECS Fargate, Lambda, API Gateway) enabling scalable and resilient solutions for store operations, e-commerce platforms, and supply chain systems.
- Implemented event-driven architecture using AWS SNS/SQS, enabling asynchronous communication between distributed services across retail, logistics, and warehouse management systems.
- Developed secure integrations with internal and third-party systems using REST APIs, OAuth2, and JWT authentication, ensuring reliable and secure enterprise data exchange.
- Built high-throughput data services using Entity Framework Core, Dapper, SQL Server, and DynamoDB, optimizing queries, stored procedures, and data access patterns.
- Integrated enterprise applications with Snowflake data warehouse, enabling efficient data ingestion and analytics reporting for business intelligence teams.
- Integrated Blazor front-end applications with .NET Core REST APIs, enabling real-time data visualization and secure interaction with financial transaction services.
- Built reusable Blazor components and Razor pages, improving UI maintainability, reducing duplicate code, and accelerating development of internal banking dashboards.
- Containerized applications using Docker and Kubernetes, enabling scalable microservices deployments and high availability across cloud environments.
- Implemented CI/CD pipelines using Azure DevOps and GitHub Actions, automating build, testing, and deployment processes and improving release reliability.
- Integrated observability and monitoring tools using AWS CloudWatch, Application Insights, and centralized logging, improving system reliability and proactive issue detection.

- Built reusable internal service libraries and SDKs to standardize API integrations and accelerate development across engineering teams.
- Implemented automated testing frameworks including unit tests, integration tests, and API testing with Postman/Newman, ensuring stable production deployments.
- Participated in technical design discussions and architecture reviews, collaborating with architects, product managers, and cross-functional engineering teams.
- Mentored developers, conducted code reviews, knowledge sharing sessions, and technical guidance, improving engineering standards across teams.

Environment: .NET 8, ASP.NET Core, C#, Web API, Microservices, REST APIs, Entity Framework Core, Dapper, SQL Server, DynamoDB, AWS (ECS Fargate, Lambda, API Gateway, SNS/SQS), Docker, Kubernetes, Azure DevOps, GitHub Actions, CI/CD, OAuth2, JWT, CloudWatch, Postman/Newman, Agile/Scrum.

Full Stack .NET Developer **Jun 2022 – Jul 2023**

Client: New York State – ITS Department of Taxation and Finance, Albany, NY

Responsibilities:

- Developed and maintained enterprise tax and financial management web applications using C#, ASP.NET MVC, ASP.NET Core, and Web API implementing scalable N-tier architectures.
- Modernized legacy .NET Framework applications to .NET Core, refactoring modules and improving application performance and maintainability.
- Designed and implemented RESTful APIs and GraphQL services enabling secure communication between government portals and backend systems.
- Developed responsive UI applications using Angular (v8–16), React (Hooks/Redux), JavaScript, TypeScript, HTML5, CSS3, and Bootstrap.
- Implemented Domain Driven Design (DDD), CQRS, and microservices principles to improve scalability and maintainability.
- Developed reusable UI components and shared libraries improving development productivity across multiple platforms.
- Implemented event-driven messaging using RabbitMQ and AWS SNS/SQS for asynchronous processing and system reliability.
- Built CI/CD pipelines using Azure DevOps and GitHub Actions, automating build and deployment processes.
- Optimized SQL Server databases and T-SQL queries, improving performance for high-volume taxpayer data processing.
- Implemented Entity Framework Core, LINQ, and Dapper for efficient data access and improved maintainability.
- Developed unit and integration tests using NUnit, improving application reliability.
- Implemented monitoring and observability using Azure Monitor and Application Insights.
- Participated in Agile/Scrum development processes, collaborating with product owners, architects, and QA teams.

Environment: .NET Core, ASP.NET MVC, ASP.NET Core, Web API, GraphQL, Angular, React, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, SQL Server, Entity Framework Core, Dapper, RabbitMQ, AWS SNS/SQS, Docker, Kubernetes, Azure DevOps, GitHub Actions, NUnit, Azure Monitor, Application Insights.

.Net Developer **Dec 2019 – May 2022**

Client: Hexagon ALI, Huntsville, AL

Responsibilities:

- Developed cross-platform mobile and web applications using C# .NET, Xamarin Forms, MAUI, and ASP.NET Core, supporting Android, iOS, and web platforms.
- Migrated over 90% of the Xamarin Forms application to MAUI, improving performance, scalability, and maintainability.
- Implemented offline-first architecture using SQL Server and local storage enabling applications to function without network connectivity.
- Developed RESTful APIs and backend services to integrate mobile applications with enterprise SaaS platforms.
- Built responsive web applications using Angular and React, implementing reusable UI components and optimized user experiences.
- Optimized SQL Server queries and stored procedures, improving application performance and synchronization reliability.
- Used Postman for API testing and validation, ensuring accurate API responses and data synchronization.
- Implemented CI/CD pipelines using Azure DevOps and Git, automating build and deployment processes.

- Applied Clean Architecture, MVVM patterns, and Domain-Driven Design, improving maintainability and modular application design.
- Integrated enterprise platforms including Salesforce APIs and Dynamics 365 for business workflow automation.
- Mentored developers and conducted code reviews, improving overall code quality and engineering standards.

Environment: .NET 6, ASP.NET Core, C#, Xamarin Forms, MAUI, Angular, React, SQL Server, Entity Framework, Dapper, Azure DevOps, Git, Postman, Salesforce APIs, Dynamics 365, Docker, CI/CD pipelines.

Software Developer **Jun 2014 – Oct 2019**
HCLTech, Hyderabad, India

- Designed and developed enterprise web applications using C#, ASP.NET Web Forms, ASP.NET MVC, and .NET Framework 4.5/4.8, delivering scalable business solutions for internal and external enterprise users.
- Built RESTful and SOAP-based services using ASP.NET Web API and WCF, enabling integration between enterprise systems and third-party applications.
- Developed responsive user interfaces using AngularJS, JavaScript, jQuery, HTML5, CSS3, and Bootstrap, improving usability and cross-browser compatibility.
- Implemented object-oriented programming principles, dependency injection, and N-tier architecture, improving maintainability and modular design of enterprise applications.
- Designed and optimized SQL Server databases, writing stored procedures, triggers, views, and indexes to improve query performance and support large-scale enterprise data processing.
- Implemented Entity Framework and ADO.NET for efficient data access and ORM-based data management.
- Developed Windows Services and background batch jobs for scheduled data processing, reporting, and enterprise system synchronization.
- Integrated applications with enterprise systems using REST APIs, XML/JSON messaging, and secure authentication mechanisms.
- Participated in application modernization initiatives, refactoring legacy modules and improving application performance and scalability.
- Implemented unit testing and integration testing using frameworks such as NUnit and MSTest, improving code reliability and reducing production defects.
- Worked closely with cross-functional teams including business analysts, QA engineers, and architects to translate business requirements into technical solutions.
- Used Git, TFS, and Visual Studio Team Services for source control, code reviews, and release management.
- Actively participated in Agile/Scrum ceremonies, including sprint planning, daily stand-ups, backlog grooming, and sprint retrospectives.
- Provided technical documentation and knowledge transfer to support teams and new developers.

Environment: C#, .NET Framework 4.5/4.8, ASP.NET Web Forms, ASP.NET MVC, ASP.NET Web API, WCF, AngularJS, JavaScript, jQuery, HTML5, CSS3, Bootstrap, SQL Server, Entity Framework, ADO.NET, Windows Services, NUnit, MSTest, Git, TFS, Visual Studio, Agile/Scrum.
