PREETHAM UPPUGANTI
413-407-0290
preethamrao829@gmail.com

Around 8 years of IT experience as a Technology Lead in CI (Continuous Integration), CD (Continuous Delivery), strong background in Build and Release Management and Cloud Implementation all within that suite the needs of an environment under DevOps Culture.

PROFESSIONAL SUMMARY:

- Experience in UNIX environment and expertise in several flavors of Linux including Red Hat, CentOS, and Ubuntu.
- Extensively worked on Hudson and Jenkins for Continuous Integration and End –to-End automation for all builds and deployments.
- Excellent hands-on experience on configuration management tool like Chef, Puppet and Ansible.
- Experience in Administration / Maintenance of source control management systems such as Git Hub and Subversion [SVN]. Created tags and Branches, Fixed the merge issues, and administered Software Repositories.
- Migrated Version Management Systems CVS -> SVN, SVN -> CVS and SVN ->Git.
- Good knowledge in creating and maintaining various DevOps related tools for the team such as provisioning scripts, deployment tools and staged virtual environments using Docker and Vagrant.
- Championed in cloud provisioning tools such as Terraform and CloudFormation.
- Support WebSphere Commerce Server 7.0 for Dev, QA, Stage, Production.
- Experience in Automated processes with custom built Python, Perl& Shell scripts.
- Experience in creating instances using AWS EC2.
- Experience in cloud automation using AWS Cloud Formation templates.
- Good experience in other Amazon web services which includes S3, EBS, RDS, ELB, Route 53, Auto scaling, Security Groups etc.
- Good knowledge on other Cloud based services like GCS, Microsoft Azure.
- Experience in Object Oriented Design and Programming concepts in Python and java.
- Experience in using build automation tools like MAVEN, Bamboo, Gradle, and ANT for the building of deployable artifacts such as WAR & EAR from source code.
- Involved in configuring and integrating the servers with different environments to automatically provisioning and cresting new machines using CM/ Provisioning tools like Chef and Puppet.
- Experience with Oracle, MySQL, and Server DB Tasks.
- Exposed to all aspects of software development life cycle (SDLC) such as Analysis, Planning, Developing, Testing and Implementing and Post-production analysis of the projects.
- Expertise in troubleshooting the problems generated while building, deploying and in Production support.
- Hands on experience in Monitoring tool like Nagios and task scheduling tools like CronJob.
- Strong hands-on experience in scripting languages like Shell, Ruby and Python.

- Installation of KVM (kernel virtual machine)
- Experience in using Tomcat Web Server and JBOSS, WebLogic and WebSphere Application Servers for deployment.
- Extensive experience on Open stack, knowledge in Dynamite, AutoSys, Zabbix monitoring Tool, NoSQL like Redis.
- Excellent knowledge on ITIL process and had best practices.
- Excellent communication skills, ability to work as a team or individually, ability to learn new technologies quickly.

TECHNICAL SKILLS:

Operating Systems : Red Hat Enterprise Linux(RHEL) 5.x/6.x/7.x, Solaris 9.x/10.x/11.x, UBUNTU
Windows : NT/XP/2003/2008, Mac OS X
Programming Languages : C, C++, Java/J2EE, and SQL.
Scripting Languages : UNIX Shell Scripting, Python, Jython, Perl, Ruby.
Application/Web Servers : Tomcat 6.0/7.0, Web Logic 9.0/10.0, JBoss, WebSphere 6.0/ 7.0/8.0
Databases : Oracle 10g/11g/12c, MY SQL, SQL Navigator, SQL Plus and Redis.
Web Technology : HTML 4.0/5.0. DHTML, XML, PHP, Java Script, Servlets and JSP.
Automation/Monitoring tools : ANT, MAVEN, Jenkins, Yocto, Chef, Puppet, GnuMake, Ansible, Nagios, Rundeck, Tensorflow, Nexus,
Zabbix.
Source Control Tools : Subversion (SVN), GIT, CVS, Gerrit, Clear Case
Cloud Services : AWS, Rackspace

EDUCATION:

Masters in Computer Science, Newark, NJ
New Jersey Institute of Technology

PROFESSIONAL EXPERIENCE:

Client: Universal Studios, Orlando, FL **Feb'23 – Present**

Sr. DevOps Engineer

• Designed and implemented CI/CD pipelines using Jenkins, automating build, test, and deployment workflows for cloud-native applications.
• Deployed Docker containers on Kubernetes clusters (EKS), optimizing orchestration for QA and Production environments.
• Provisioned AWS infrastructure using Terraform and CloudFormation, managing services like EC2, S3, Route 53, and ASG.
• Wrote Ansible playbooks to automate environment setup and configuration management across AWS and Azure.

• Integrated security scans with Fortify and BlackDuck into Jenkins pipelines to ensure compliance and code quality.
• Created Bitbake recipes in Yocto for custom kernel builds and embedded application integration.
• Enhanced monitoring and logging solutions using Prometheus, ELK Stack, and Grafana to analyze system performance.
• Built a secure VPC and established VPN connectivity between AWS and on-premises data centers.
• Automated server provisioning and infrastructure tasks using Python and Shell scripts.

Environment: Jenkins, Docker, Kubernetes (EKS), Terraform, CloudFormation, AWS EC2, S3, Route 53, ASG, Ansible, Fortify, BlackDuck, Yocto, Prometheus, ELK Stack, Grafana, Python, Shell, VPN, VPC.

Client: Apple, San Francisco, CA **April'22 – January'23**
Sr. DevOps Engineer

• Built CI/CD pipelines with Jenkins and Spinnaker, enabling Canary and Blue-Green deployments for high availability.
• Managed Docker container orchestration using Kubernetes clusters on AWS EKS, ensuring microservice scalability.
• Automated server infrastructure provisioning with Ansible and Python scripts for seamless environment setup.
• Created Bitbake recipes (Yocto) to integrate kernel tools into SDKs and supported JBoss/WebLogic patching tasks.
• Configured monitoring solutions with Nagios and SonarQube to track builds, resolve issues, and optimize processes.
• Provisioned AWS services (VPC, EC2, S3, and ELB) and established a secure VPN connection between AWS and data centers.
• Implemented static and dynamic code scans within Jenkins pipelines for automated security checks.
• Designed and deployed cloud environments using Azure, setting up virtual machines and storage services.
• Developed Groovy scripts to enhance Jenkins pipeline functionalities for various deployment scenarios.

Environment: Jenkins, Spinnaker, Docker, Kubernetes (EKS), AWS, Azure, Ansible, Python, Yocto, JBoss, WebLogic, Nagios, SonarQube, Groovy, VPN, VPC.

Client: Verizon, Austin, TX **September'21 – March'22**
Sr. DevOps Engineer

• Developed CI/CD workflows using Jenkins pipelines and Groovy scripts for automated deployment across multiple environments.
• Containerized applications with Docker and deployed workloads on Kubernetes clusters, managed via Amazon EKS.
• Leveraged Terraform and CloudFormation for Infrastructure as Code (IaC) to provision AWS resources like EC2, PVC, and Route 53.
• Managed and configured Ansible Tower to automate patch management, deployments, and infrastructure setup.

• Integrated static and dynamic code analysis using Fortify and SonarQube, ensuring high-quality and secure code releases.
• Automated Python scripts for build processes, cloud monitoring, and log analysis across AWS and Azure environments.
• Enhanced logging capabilities by deploying ELK Stack (Elasticsearch, Logstash, Kibana) to analyze and visualize logs.
• Configured Docker Compose files for local development environments, simplifying developer workflows.
• Scheduled and monitored Kubernetes workloads using custom Prometheus alerts and Grafana dashboards.

Environment: Jenkins, Groovy, Docker, Kubernetes (EKS), Terraform, CloudFormation, AWS (EC2, PVC, Route 53), Ansible Tower, Fortify, SonarQube, Python, ELK Stack, Prometheus, Grafana, Docker Compose.

Client: T-Mobile, Bothel, WA **Feb'21 – September'21**
Sr. DevOps Engineer

• Orchestrated end-to-end CI/CD pipelines with Jenkins for automated builds and deployments, integrating Ansible for environment setup.
• Deployed containerized applications using Docker and Kubernetes, managing orchestration through AWS EKS clusters.
• Provisioned and maintained AWS infrastructure (EC2, S3, EBS, Route 53) using Terraform and CloudFormation templates.
• Configured Spinnaker for advanced deployment strategies like Red-Green and Canary releases to ensure zero downtime.
• Enhanced monitoring and logging capabilities using ELK Stack, Prometheus, and Nagios for proactive issue detection.
• Wrote Python and Shell scripts to automate build, deployment, and server configuration processes across environments.
• Built and managed Nexus repositories for efficient artifact storage and sharing across teams.
• Deployed virtual machines and configured cloud resources on Azure to support hybrid cloud environments.
• Implemented Makefile-based build systems for compiling and packaging applications efficiently.

Environment: Jenkins, Docker, Kubernetes (EKS), AWS (EC2, S3, EBS, Route 53), Terraform, CloudFormation, Spinnaker, ELK Stack, Prometheus, Nagios, Python, Shell, Nexus, Azure.

Client: AT&T, El Segundo, CA **November'18 – Jan'21**
Sr. DevOps Engineer

- Developed and maintained CI/CD pipelines using Jenkins, integrating Docker, Kubernetes, and Ansible for automated build, test, and deployment workflows.
- Built and managed Docker container clusters orchestrated with Kubernetes on GCP, optimizing deployment and scaling.
- Configured Git with Jenkins for CI environments, containerized applications using Docker and Ansible, and automated Kubernetes cluster management with playbooks.

- Streamlined application monitoring and log analysis using ELK Stack (Elasticsearch, Logstash, Kibana) and performance tracking with Nagios.
- Built and scaled Kafka clusters for large-scale data streaming, resolving message failures using Elasticsearch and Kibana.
- Automated SQL and Windows environment management tasks using PowerShell, improving operational efficiency.
- Orchestrated local Kubernetes deployments for development and testing, deploying containerized applications in clusters.
- Integrated SAP HANA DB with Elasticsearch for real-time data streaming and proactive threat analysis using NetFlow.

Environment: Jenkins, Docker, Kubernetes (GCP), Ansible, Git, ELK Stack, Nagios, Kafka, SAP HANA, Elasticsearch, Kibana, NetFlow, PowerShell.

Client: Barclays Bank, New York City, NY **Dec'16 – November'18**
Sr. DevOps Engineer

- Assisted in migrating applications from on-premises data centers to AWS, defining strategies aligned with application architecture and development needs.
- Provisioned Kubernetes clusters on AWS using Docker, Ansible, and Terraform, automating middleware server management with Ansible playbooks and Ansible Tower.
- Integrated Ansible with Jenkins for monitoring and automation and managed AWS EC2 instances with configuration management tools.
- Automated CI/CD pipelines in AWS CodePipeline for deploying Docker containers to ECS, leveraging CloudFormation, CodeBuild, CodeDeploy, and S3.
- Transitioned AWS infrastructure to serverless architecture using AWS Lambda and Kinesis, deployed via CloudFormation.
- Designed and implemented scalable cloud-based web applications using AWS and GCP, ensuring high availability.
- Built and maintained Docker container clusters managed by Kubernetes on GCP, automating deployments and scaling workloads.
- Developed custom scripts in Python, Ruby, Shell, and Perl to automate tasks, including SQL backups and environment setups.
- Architected hybrid AWS and on-premise solutions, virtualized environments with KVM, VMware, and Xen, and monitored systems with Nagios.
- Designed Kafka-based systems for backend auto-scaling and large-scale data streaming, resolving issues with Elasticsearch and Kibana.

Environment: Kubernetes (AWS), Docker, Ansible, Terraform, AWS Lambda, Kinesis, CloudFormation, AWS ECS, GCP, Python, Ruby, Shell, Perl, SQL, KVM, VMware, Xen, Kafka, Elasticsearch, Kibana.
